Excerpt: .seem) as they may, here we have in this Strophia a fine example of the changing of one species into another, and also very clearly shows how careful we, of to-day, must be in recording all the steps of change in order that future generations may benefit by our researches. The typical Changing Strophia may be at once recognized by the dark color, white, and numerous striations. HABITS AND DISTRIBUTION. I found the Changing Strophia on March 29, 1893, clinging to shrubs along the rocky, northern shore of the western half of Long Key, an island that lies about a mile east of Hog Island. I traced the shells westward along the shore as far as the little bay on which the Marine Hospital stands and eastward to a sand beach about midway on the key. They were not found more than a few...
